

Romania's LA ORIZONT - SKYLINE DRONES are European launch customers for IDRONECT OS

Timișoara, September 18th 2020

Skyline Drones and La Orizont, in a joint alliance, have been onboarded on the new IDRONECT OS and have become the launching customer and partner for the drone management platform in Europe.

Ciprian IORGA – General Manager, La Orizont and Skyline Drones Romania , says; “Together we partnered with IDRONECT as a solution for all our flight operations, allowing us to spend more time flying and less time worrying. iDroneCT is a heavy duty drone operation platform and offers an efficient management solution for our projects, resources and equipment. We offer a wide range of services in the fields of precision agriculture and custom professional inspection services via state of the art grade drones. As such we needed a full and comprehensive system that can manage all aspects of our business. IDRONECT OS is really the only platform that meets all of our expectations.”

Tom Verbruggen, CEO of IDRONECT, adds “We are very happy of having Skyline Drones and LA Orizont, join the IDRONECT community and having onboarded the team on our newest IDRONECT OS platform. We really step up our game by supporting a drone company and operator that flies multiple drone types, with a large team of pilots and management staff. That is what IDRONECT OS is really all about: to ease administration, maximize efficiency, and to enable the drone company to scale and grow. Furthermore, Skyline Drones and LA Orizont are not just our customers but they are also our brand ambassadors in Romania. We are very proud to have this partnership.”

IDRONECT OS is the operating system for professional drone businesses, that makes it easy to fly drones in a safe and legal way, but also makes it easy to run a professional drone business. It maximizes compliance towards regulations and procedures and allows the operator to win the market before the competition has even started the quoting process. IDRONECT OS replaces more than 10 other applications that are typically used by drone operators and gathers all required information in one place. www.idronect.com contact: info@idronect.com or tom@idronect.com

Skyline Drones and LA Orizont Romania is a joint alliance that offers a wide range of services in the fields of precision agriculture and custom professional inspection services via state of the art grade drones.
